COUNTY ACTION REQUESTED ON: Server Blades, Virtual and Operating System Software

HISTORY, FACTS AND ISSUES:

The new courts software package will require many virtual servers for the implementation. In order to accommodate this, new server blades, virtualization software, and operating system software will have to be purchased. The request is for four server blades, visualization license, and Microsoft Server Software to create redundant application and database servers, along with a separate test and development environment. The test/development servers will also be used to facilitate AS-400 data migration and application development.
